PROFESSIONAL SUMMARY

ISTQB-certified QA Automation Engineer with 3+ years of experience delivering robust test automation for enterprise web, API, and data-driven applications in Agile/Scrum environments. Skilled at translating business requirements into structured test scenarios and collaborating with Product Owners, Business Analysts, and developers to define acceptance criteria, validate end-to-end business workflows, and maintain requirement traceability. Currently specialized in Playwright with TypeScript, having led the end-to-end migration of a large legacy Selenium (Java) suite to a modern Playwright + TypeScript framework — improving execution speed, stability, and maintainability. Experienced across functional, regression, integration, exploratory, and User Acceptance Testing (UAT), complemented by SQL data validation, JMeter performance testing, CI/CD integration with Jenkins, and AI-assisted development using Claude AI and Cursor AI to accelerate framework design and test delivery.

CORE COMPETENCIES

Test Automation Framework · Playwright · TypeScript · JavaScript · Selenium WebDriver · Java · API Testing · RESTful API · Postman · JSON Schema Validation · Business Process Validation · Requirement Analysis · Acceptance Criteria Definition · Requirement Traceability · UAT Coordination · Exploratory Testing · Test Data Management · CI/CD · Jenkins · Git · GitHub · Azure DevOps · Page Object Model (POM) · Cross-Browser Testing · Regression Testing · Functional Testing · Smoke & Sanity Testing · System Integration Testing · End-to-End (E2E) Testing · Performance Testing · JMeter · SQL · Database Testing · Defect / Bug Lifecycle · Root-Cause Validation · JIRA · Test Cases · Test Scenarios · Test Plans · SDLC · STLC · Agile · Scrum · TestNG · Maven · Allure / HTML Reporting · Trace Analysis

CORE SKILLS

- **Primary Automation (Current):** Playwright with TypeScript – UI + API automation, fixtures, parallel & cross-browser testing, Page Object Model (POM), auto-waiting, trace viewer, HTML & Allure reporting
- **Business & Functional QA:** Business requirement analysis, acceptance criteria definition, business process validation, end-to-end workflow validation, UAT coordination, exploratory testing, requirement traceability
- **API Testing:** RESTful API automation within Playwright (request fixtures), Postman, REST API validation, JSON schema validation, status-code & response assertions
- **CI/CD & DevOps:** Continuous Integration / Continuous Deployment (CI/CD), Jenkins pipeline setup & maintenance, Git, GitHub, Azure DevOps, streamlined regression in CI
- **Foundational Automation Expertise:** Selenium WebDriver, Java, TestNG, Maven (1.5 years) — established a strong automation foundation that enabled a smooth, high-impact transition to Playwright
- **Programming:** Core Java (OOPs, Collections, Exception Handling), TypeScript, JavaScript
- **Database & Performance:** SQL data validation, backend & database testing; JMeter (Load, Stress, SLA validation)
- **Test Management & Process:** JIRA, Azure DevOps, test cases, test scenarios, test plans, defect / bug lifecycle, requirement traceability, release validation documentation, SDLC, STLC
- **AI Productivity:** Claude AI, Cursor AI – framework refactoring, test generation, faster delivery
- **Methodologies:** Agile, Scrum, SDLC, STLC

PROFESSIONAL EXPERIENCE

QA Automation Engineer

2023 – Present

K12 Insight India Pvt Ltd — Global Product Company (US-focused customers)

- Migrated Selenium (Java) automation scripts to Playwright with TypeScript, implementing Page Object Model, fixtures, and parallel execution to elevate framework scalability and maintainability.
- Designed and built a scalable Playwright + TypeScript automation framework using Page Object Model, fixtures, and data-driven design, with parallel and cross-browser execution for fast, reliable regression.
- Reviewed business requirements and collaborated with Product Owners and Business Analysts to define acceptance criteria and ensure comprehensive test coverage.
- Validated end-to-end business workflows across enterprise applications and supported User Acceptance Testing (UAT) activities.

- Automated end-to-end UI workflows across core product screens, reducing manual regression effort by ~75%.
- Executed regression, integration, and exploratory testing for multi-module releases to ensure quality across interconnected features.
- Implemented API test automation directly within the Playwright framework using Playwright's request fixtures, enabling combined UI + API coverage and validation of backend services and integrations in a single suite.
- Set up and sustained Jenkins CI/CD pipelines to run Playwright automation suites automatically on each build, cutting pipeline failures by ~40% and reducing average build-to-feedback time to under 15 minutes.
- Minimized flaky tests and strengthened automation stability across releases through Playwright auto-waiting, trace analysis, and retry strategies.
- Created and maintained test data, supported test environment preparation, and documented reproducible scenarios for customer-reported issues.
- Worked with developers to reproduce defects, carry out root-cause validation, and verify fixes before release.
- Upheld requirement traceability using JIRA and Azure DevOps and contributed to release validation documentation.
- Carried out SQL backend data validation to ensure data accuracy and business-logic correctness.
- Conducted performance, load, and stress testing using JMeter to identify bottlenecks and validate SLA compliance.
- Leveraged Claude AI and Cursor AI to rapidly generate and refactor Playwright automation code, accelerating sprint delivery and increasing QA productivity.
- Developed strong foundational expertise in Selenium WebDriver, Java, TestNG, and Maven (~1.5 years) before leading the team's transition to Playwright.
- Partnered with developers and cross-functional stakeholders throughout Agile/Scrum ceremonies to align on priorities and delivery timelines.

KEY PROJECTS

- **AI Chatbot, Telephony & Ticket Workflow Modules:** Delivered full Playwright + TypeScript test coverage across three business-critical product modules, aligning automation scope directly with customer-facing workflows.
- **Framework Modernization:** Retired the legacy Selenium suite in favor of a modern Playwright architecture, cutting long-term suite maintenance overhead and boosting cross-browser reliability.
- **Backend & Third-Party Integration Coverage:** Extended the automation suite with request-fixture-based API checks, closing prior gaps in backend and third-party integration validation.
- **Pre-Release Performance Benchmarking:** Ran JMeter load and stress tests ahead of major releases to confirm SLA compliance under peak traffic conditions.

EDUCATION

B.E. Electronics & Telecommunication — Mumbai University 2019 – 2023 | CGPA: 8.20

ACHIEVEMENTS & CERTIFICATIONS

- ISTQB® Certified Tester – Foundation Level (CTFL)
- Java Certification
- Spearheaded the Selenium-to-Playwright migration, becoming the driving force behind the team's shift to a modern automation stack while introducing new automation capabilities and expanding overall test coverage.

SOFT SKILLS

- Strong analytical and troubleshooting skills
- Detail-oriented with big-picture understanding
- Collaborative team player, passionate about continuous learning and quality excellence
